SUMMARY

Self-taught full stack developer. I build web apps with React and Next.js on the frontend and Django REST Framework on PostgreSQL. I focus on the backend logic that keeps data correct: per-company permissions, transactions and row locks for payments and stock, and tests for the cases that should fail. Looking for my first role on a development team.

SKILLS

Languages	TypeScript, JavaScript, Python, SQL, HTML, CSS
Frontend	React, Next.js (App Router), Tailwind CSS, Zustand
Backend	Django, Django REST Framework, REST APIs, session and JWT authentication
Data	PostgreSQL, SQLite, transactions, row locking, constraints
Testing & tools	Django tests, Playwright, GitHub Actions, Docker Compose, Git, Linux, Render, Vercel
AI-assisted dev	Claude Code, OpenAI Codex. I review and test every change before committing.

PROJECTS

Fracxion · Multi-company business management — github.com/nelsonvis3/fracxion-facturador

- Built customer, catalog, internal invoice and payment modules where each company only sees its own data; the backend checks membership and role on every request.
- Prevented duplicate invoice numbers and over-payments under concurrent requests using PostgreSQL transactions, row locks (select_for_update) and unique constraints.
- Kept documents historically accurate: drafts snapshot customer and catalog data, and payment reversals are separate records saved with the audit log in one transaction.
- Wrote 360+ Django tests and 50 Playwright end-to-end tests for permissions, tenant isolation and concurrency, run in GitHub Actions.

Stack: Next.js, TypeScript, Django REST Framework, PostgreSQL, Docker Compose

Ragnar Suplementos · Online store for a local shop — github.com/nelsonvis3/ragnarsuplementosfsa

- Rebuilt the store from HTML/JavaScript and Supabase into Next.js plus a Django REST API that owns prices, stock and orders.
- Reserved stock inside a transaction with row locks so products sold alone and inside bundles don't oversell; expired reservations release their units.
- Integrated Mercado Pago: the webhook verifies the HMAC signature and re-checks amount and currency with the provider before approving an order.
- Added signed delivery quotes (OpenStreetMap geocoding and OSRM routing) that expire after 15 minutes, and a checkout key so a retried purchase returns the same order.

Stack: Next.js, React, TypeScript, Zustand, Django, PostgreSQL

RoadLedger · Truck trip planner (technical assessment) — Live demo

- Turned three locations and available driving hours into a route, required stops and printable daily logs from one Django API endpoint, rendered with React and MapLibre.
- Integrated Photon geocoding and OSRM routing with timeouts and a fallback provider; 12 tests cover input validation, the API contract and midnight splits.

Stack: Django REST Framework, React, MapLibre, OSRM, Render

OTHER EXPERIENCE

Customer service, Hakuna Matata, Formosa. Took orders and coordinated with floor and kitchen staff. — Apr–May 2026

Cleaning and maintenance, Brosta S.R.L., Formosa. Wrote operations reports and trained new staff. — Apr–Aug 2025

EDUCATION

CS50's Web Programming with Python and JavaScript, Harvard University / edX — Sep 2026–present

Full Stack JavaScript, The Odin Project — Sep 2026–present

Front End Development Libraries, freeCodeCamp — Certified, Aug 2026

High school diploma, E.P.E.P. N.º 179, Formosa — 2023

LANGUAGES

Spanish: native | English: A2, I read technical documentation
